13 EXPLOSIVE GAMES FOR THE ZX 81

TIM HARTNELL

USE THIS BOOK WITH YOUR
TIMEX Sinclair 1000™ COMPUTER!

ZX81

You can step down to slower RAM if you want, but you'll only save about \$5. If you plan on switching to another processor and want to overclock, consider investing a little more in the board. Having said that, if you can increase your budget you will improve the performance of the system by leaps and bounds. Photo Courtesy: eclipse_images/E+/Getty Images

With the world still dramatically slowed down due to the global novel coronavirus pandemic, many people are still confined to their homes and searching for ways to fill all their unexpected free time. We are a non-profit group that run this website to share documents. In this game, you must coordinate with your teammates to destroy the opposing team's base. Each character has its own set of weapons to use during a match. It's still possible, just don't expect it to be snappy or have native-resolution, real-time playback. From here, just power through 'next' until it's installed and hit finish. A new window should open (that's the Minecraft launcher), log in with your email address and password then click 'play'. You can slot in an Intel Core i5-10600K for around \$80 more, which will greatly increase performance. We need your help to maintain this website. Click on 'download for Windows' and a file named 'MinecraftInstaller.msi' should auto download. Click on that file and the game will install. To keep our site running, we need your help to cover our server cost (about \$400/m), a small donation will help us a lot. Let's take a look at a few of the top-rated free PC games, according to Tech Radar and PC Magazine, across a range of genres. Aw man! There are two PC versions of Minecraft available to download: Minecraft Java Edition or Minecraft for Windows 10 (commonly known as Bedrock). MORE FROM QUESTIONSANSWERED.NET Thank you for interesting in our services. Click on that. Upon clicking the button, you now have to make a choice: which version of Minecraft do you want to download? If you're worried about what a gaming hobby could do to your tight budget right now, we've got you covered. If gathering resources, building structures and shooting at your enemies is what you look for in a game, Fortnite is the game for you. Product Price Processor Intel Core i3-10100 \$130 CPU Cooler Cooler Master Hyper 212 Black \$39 Motherboard Gigabyte B460M D53H \$95 RAM ADATA XPG Z1 16GB DDR4-3000 \$75 Storage Crucial BX500 480GB SSD \$60 Case Cooler Master MasterBox Q300L \$49 Power Supply EVGA 450W Bronze \$42 Total \$485 We have slashed the list of parts to the absolute minimum with the result that this build sits comfortably inside our budget. Editors' Recommendations Enter your card details, double check the amount at the bottom, and when you're happy, click the 'purchase' banner at the bottom. Wait for the page to load and you'll be jetisoned to the 'purchase complete' screen. It's compact, thanks to its micro ATX form factor, but it still provides enough room for full-size components. Matches take place between five-person teams that focus on destroying their opponents' bases and towers. Don't expect to master the complexities of this game overnight, but the action starts as soon as you click the 'play' button. While a SATA SSD will never be as fast as the latest NVMe models, it is still far quicker than any hard drive and has enough capacity for you to edit 1080p video on. Photo Courtesy: @FortniteGame/Twitter Even if you aren't playing with friends, it's easy to find a match to join, and the game is highly addictive. PSU: EVGA Bronze 450W 80+ Bronze We finish off the build with a decent quality power supply and while the EVGA Bronze is only rated at 450W, that still gives us a massive safety margin. Photo Courtesy: @LeagueOfLegends/Twitter The game rewards careful tactics and good teamwork and is always free to play, but if you want to keep your character after a week or add any special features and enhancements to your game play, you will have to pay a fee. Note: All the components below are purchasable from Amazon and were found on the site as part of our research and priced accurately at the time of writing. Unfortunately, they also quickly sell out, but perhaps not forever. We'll have you up and running faster than you can say "Creepin'". The game is played from a third-person perspective, making combat feel much more dynamic. CPU: Intel Core i3-10100 While we would love to recommend an AMD Ryzen 5 3600 or 5600 CPU, our budget simply won't stretch that far. Whichever version you choose of the Hyper 212 you can be confident it will allow the Core i3 10100 to run at maximum speed for hour after hour without drama. Screenrant gave this fighting game a "Very Good" rating. Instead, we have chosen an Intel Core i3-10100 which lives far down the list of Team Blue's latest 10th Gen CPUs. The numbering for Intel models is all over the place these days, so it is worth spelling out that this Core i3 has four cores with hyperthreading, so you get eight CPU threads. Time to Buy and Install Minecraft Now comes the buy page. Brawlhalla The "brawl" in Brawlhalla pretty much says it all for this fighting game that is similar to the popular Super Smash Bros. You should have received a four letter code you'll now need to enter back on the Minecraft website to move on. Enter the code in the box, hit 'verify' and you're almost done. 5. The options here are computer, mobile, console, and others (yes, there are that many versions of Minecraft!). For this guide, we want to click on the one marked 'computer'. 3. A key feature of the Core i3-10100 is the inclusion of Intel UHD Graphics 630 which means we can do without an expensive graphics card and leave the CPU to do all the work. Minecraft Java Edition or Minecraft Windows 10 (Bedrock)? I know, we're still picking which Minecraft we want! We're nearly done, though. The next choice you have to make is which version do you want to download: the Java Edition of Minecraft or the Windows 10 (Bedrock) version? If you opted for the Windows 10 game you'll be transported to a version-specific Minecraft page with a 'buy' button. Well, one of the best parts about the game is that you can play with your friends — regardless of which platform they have, PC or gaming console — so get ready for some "friendly" backstabbing. CPU Cooler: Cooler Master Hyper 212 Black There are many versions of the timeless Cooler Master Hyper 212 CPU cooler; this one happens to be black. Meanwhile Java only allows players to play with other Java players, but has more public servers and a better modding scene. 4K editing might be a little difficult on a machine like this. The base speed is 3.6GHz but it can boost up to 4.3GHz, so you can expect reasonable performance from this cheap CPU. The game dumps you into a world with 99 other players, where you engage in a free-for-all battle until only a single player is left standing. The game also continues to make an effort to perfect the fan-favorite Master League mode. Smite also features a rotating roster of free characters that can be permanently purchased with in-game currency or bought in packs with real cash. Go to the Minecraft website First things first, you'll want to mosey on over to the Minecraft website. The PC supplies a massive power source that effectively guarantees durability and longevity. This B-class board doesn't, but neither does the i3-10100 we chose. by Nintendo. Photo Courtesy: @Brawlhalla/Twitter Smite Smite is another popular MOBA, this one with its champions being gods from ancient pantheons and classic myths. Some teams and stadiums are only available with the paid version of the game, but fan favorites like FC Barcelona and Manchester United are included. Please help us to share our service with your friends. Shop wisely and you might find you have enough cash for a 2TB HDD in our minuscule budget. When it comes to escaping the real world and killing a little time, it's hard to beat the magic of some PC gaming. Instead, we have moved away from a dedicated graphics card and have chosen an Intel 10th-gen CPU with integrated graphics. There are some notable differences between the two versions. Although we didn't include a graphics card in this build, you can easily fit a full-size one in this case. Moving to a desktop PC can speed up your workflow significantly, and while you could easily spend thousands on a bespoke-built machine we are going to demonstrate that you can also put together a great \$500 PC build for video editing. Motherboard: Gigabyte B460M D53H The Gigabyte B460M D53H perfectly compliments our Core i3-10100. It's a micro ATX board that includes ample room to expand your storage in the future, as well as a full-sized PCIe x16 slot if you decide to add a graphics card down the line. A good place to upgrade is the processor. Plus, it comes with a clear acrylic side panel so you can show off your hard work inside. We chose an inexpensive 16GB kit from ADATA, which offers

speeds of up to 3,000MHz. It's not the fastest kit around, but it's more than enough to make the most of the Intel CPU we've chosen for this build. PC Gamer rated Smite an 86 out of 100, with particularly high marks for its arena combat. Editing video at 1080p and below will be a breeze on a machine like this, and the onboard GPU helping to accelerate a number of rendering workloads. Now just sit back as Minecraft Java Edition downloads and you can jump into a world of endless fun.Today's best Minecraft deals You might be able to edit videos on your phone or an old laptop, but it's hardly an ideal experience. You fight in competitions with up to four players, and the ultimate goal is to knock your opponent out of the arena to score points. It's understated in a way that many budget cases aren't while still providing enough flair to stand out. The downside of using a 10th-gen CPU is that it is based on Socket LGA1200 and requires a 400 series chipset motherboard. League of Legends League of Legends is one of the most highly played multiplayer online battle arena (MOBA) games available for the PC. If an item isn't for sale, shop around, you might find it at your favorite online store. Storage: Crucial BX500 480GB SSD With SSDs selling for very affordable prices for even the tightest budgets, there's no excuse for you to construct a PC without one. The build and what it can do These are troubled times with high prices and low availability of parts, and we could easily have blown our limited budget on the CPU or graphics card. Click 'buy' and you'll then move to the Microsoft Store where you can purchase that version of the game and install it right away. Note: If it's the Windows 10 version you were after, you're all done now!If you'd like to download Minecraft Java Edition, however, click on that version, on the left, and when the next page loads, click buy. 4. We scoured the web for great hardware deals to help you build a \$500 video editing PC. It's always worth checking each part's price before you commit to buying as they do change regularly. If you're more interested in budget gaming, here's our guide on a great \$500 gaming PC. We normally push Intel users to Z-class motherboards because they support overclocking. Bedrock doesn't have an updated combat system, but it does allow for crossplay with Xbox One and mobile, and has some content that Java doesn't. Each year, new editions don't necessarily offer many new features versus previous years, but they do tend to introduce gaming improvements like better dribbling and player responsiveness. However, we are confident this system should be plenty quick enough for most editing tasks. If you're wondering how to download Minecraft for PC, you've come to the right place. League of Legends uses a freemium model where characters rotate weekly, and certain extras cost money. The game does provide opportunities to earn game currency as you play, which you can then use to purchase champions. Photo Courtesy: @officialpes/Twitter The "Lite" version of Pro Evolution Soccer is free and gives players access to the Online myClub and PES Matchday Mode in addition to playing in Local and Co-op Matches and honing their skills in Training Mode. Read on for our simple steps on how to download Minecraft for PC. (Image credit: Mojang)1. Photo Courtesy: @SMITEGame/Twitter Pro Evolution Soccer 2018 Lite Pro Evolution Soccer (PES) is one of the bestselling video game franchises of all-time around the world. If you're not quite sure which to choose then we advise going for Java, as it included a free copy of Bedrock with it.Ready to get creative? Generic passwords aren't allowed, so no animal names and whatnot. Case: Cooler Master MasterBox Q300L The Cooler Master MasterBox Q300L is our go-to case recommendation for budget builds. Fortnite Fortnite is arguably the most popular of the Battle Royale games to hit the tech world in quite some time. It includes multiple USB 3.0 ports on the back and headers on the board, so you have options for connecting high speed external storage, as well. Frankly, we would have liked more of everything: More CPU cores, a graphics card, double the storage, double the RAM, and then top it off with a high-end power supply and a liquid cooler. Memory: ADATA XPG Z1 16GB DDR4-3000 RAM prices are all over the place in 2021, so you could easily add \$50 or more to the build price depending on the kit you choose. That's why we've opted for this 480GB SSD from Crucial for our storage solution. Registering for Minecraft.NetWhile Windows 10 users are now finished, there are still a few things left to do to grab the Java Edition. After you hit 'buy', we'll need to register a new account with an email address and password. Think that sounds bloodthirsty? If you plan on using your PC for multimedia endeavors that require a lot of space, we recommend purchasing a hard drive big enough to support massive file storage. The fun of gaming gets even better when you find games you love that you can play for free on your PC. Like League of Legends, Brawlhalla engages in a weekly rotation of playable characters, but you can always purchase your favorites using in-game currency you collect as you play. From here you should be greeted by a large picture of Steve and Alex overlooking a Minecraft world. Look to the left side and there should be a green box that says 'get Minecraft'. Once that's all filled out hit 'register' then open a new tab and pull up your email inbox. Using a quad-core CPU raises questions about performance, but when you factor in the need for a reasonable amount of RAM and storage, our main priority is decent cooling and reliability as we are fully aware this PC will spend its working life running at 100% load.
